

IN THE CLAIMS:

A status of all the claims of the present Application is presented below:

1. **(Currently amended)** An audio/video (A/V) component networking system, comprising:

a centralized storage system adapted to communicatively receive a plurality of source components, each source component adapted to provide A/V program data; and

a sink component disposed remote from the storage system and communicatively disposed between the storage system and a presentation device, the sink component adapted to receive A/V program data from at least one of the plurality of source components and transmit the A/V program data to the presentation device, the sink component adapted to enable a user to select an A/V menu interface data-stream associated with at least one of the plurality of source components for display on the presentation device, and wherein the sink component is configured to control streaming of the selected A/V menu interface from the corresponding source component to the presentation device.

2. **(Original)** The system of Claim 1, wherein the sink component is adapted to decode the A/V program data.

3. **(Original)** The system of Claim 1, wherein the sink component is adapted to transmit the A/V program data to the presentation device in real-time.

4. **(Original)** The system of Claim 1, wherein at least one of the source components is selected from the group consisting of a satellite receiver source component, a digital versatile disk (DVD) source component, a compact disc (CD) source component, a computer, and a cable source component.

5. **(Original)** The system of Claim 1, wherein the sink component is adapted to perform a registration operation to register the storage system with the sink component.
